

Awareness Website Handover Report

OFFICIAL PROJECT CONFIGURATION & DOCUMENTATION • VERSION 1.0

1. Executive Summary

This handover document outlines the technical design, directory architecture, and deployment configuration for the newly developed **InAmigos Foundation Awareness Website**. Developed using semantic HTML5, clean vanilla CSS3, and modern vanilla JavaScript, the website serves as a high-fidelity portal to inspire trust, showcase social impact, and recruit volunteers nationwide. The codebase is fully responsive, lightweight, SEO-friendly, and operates 100% offline-compatible by utilizing a local copy of the Lucide Icon library.

2. Deployment Status & Live Links

GitHub Repository:	https://github.com/akagyani/inamigos-foundation-website
Vercel Production Link:	https://inamigos-foundation-website-4hatny947.vercel.app
Hosting Platform:	Vercel (Zero-Configuration Static Hosting & Global CDN)
Continuous Integration:	Linked to GitHub main branch. Pushes automatically trigger live updates.

3. Technical Stack & Standards

- **Frontend Core:** Semantic HTML5 structural layout incorporating modern elements like `<header>`, `<main>`, `<section>`, and `<footer>`.
- **Styling Framework:** Custom design system written in vanilla CSS3 using variables for rapid theme switching, CSS Grid for multi-breakpoint alignment, and smooth cubic-bezier transitions.
- **Interactive Layer:** Vanilla JS (ES6) controlling all UI flows without heavy external package overhead. Utilizes IntersectionObserver for performant viewport entrance animations.
- **Graphic Assets:** Lucide Icon library compiled locally in `lucide.min.js` for instant SVG loading, coupled with high-fidelity generated project and outreach photography.

4. Core Interactive Features

- **Light / Dark Theme Manager:** A toggler button in the nav bar that updates the html theme token, swapping variables between light slate and midnight dark mode. Stores state in local browser storage.
- **Dynamic Flagship Project Filter:** Seamlessly filters cards for the 6 flagship projects (SEVA, Bachpanshala, Udaan, Jeev, Prakriti, Vikas) by category. Includes slide-open details drawers for project goals.
- **Animated Statistics:** Smooth, decoupled quadratic easing count-up counters that animate numbers from zero when the user scrolls into the social footprint section.
- **Fullscreen Image Lightbox:** Fullscreen modal view for gallery images with sliding navigation controls. Built with keypress listeners (Escape to close, Arrows to slide) for WCAG compliance.
- **Interactive Map Callout:** CSS gridded and animated map mockup with a pulsing locator pin detailing the headquarters.
- **Real-time Validation:** Robust client-side error validation for both the Contact Form and Volunteer Form.

5. Codebase Directory Structure

File / Folder Path	Description & Purpose
/index.html	Main entry HTML containing structural markup and SEO metadata.
/style.css	CSS design tokens, layouts, colors, theme variables, and keyframe definitions.
/app.js	All logic (navigation, theme manager, filters, counter, validation, lightbox).
/lucide.min.js	Offline-ready Lucide vector icons library script (v1.23.0).
/assets/	Directories hosting optimized png assets (logo, hero_bg, 6 project cards, 6 gallery items).

6. Quality Assurance & Audits

The platform has been audited for compliance with modern web best practices:

- **Lighthouse Score:** Performance and SEO optimized (score target > 95) with lazy-loaded images.
- **Accessibility (WCAG):** Form elements link directly to error text; aria-attributes manage active navigation states; keyboard focus trapping enabled on modal lightboxes.
- **Browser Compatibility:** Fully tested across modern browsers (Chromium, Firefox, Safari) and mobile viewport widths.
